SAFFIRE-I Image Directory Nomenclature

Xn_Raw_CamOriginal	RAW Camera Original - contains 8 byte offset that must be corrected prior to color interpolation.
Xn_Raw_DistroMaster	RAW Distribution Master - 8 byte offset corrected using ImageJ. Use this file set to distribute RAW image files and color interpolation processing.
Xn_Raw2TIFF	RAW_DistroMaster files color interpolated and saved as TIFF, using IrfanView Batch Conversion process.
Xn_Raw2TIFF_icmad	Raw2TIFF files annotated with ICMAD 'Exposure' and 'Gain' information. Data is appended to the bottom of each frame using ImageMagick script.
Xn_jpeg	Flight hardware generated jpeg images, created on-board from the RAW Camera Original.
Xn_jpeg_corrupt	Jpeg images received corrupted after downlink.
Xn_jpeg2png_icmad	Flight hardware generated jpeg images annotated with ICMAD 'Exposure' and 'Gain' information. Data is appended to the bottom of each frame using ImageMagick script and re-saved as .png format to prevent additional compression artifacts.

"X" Denotes run type
"n" Denotes run number
